# Raw Data Quality Analysis & Insights

**"Record-level and cell-level data quality assessment"**

## Data Quality Insights

- **319 issues** detected across **500 records (2,500 cells).**
- **Invalid values dominate (76.8%)**, driven by inconsistent Employment Status (e.g., "EMP", "retired").
- Issues are uniformly distributed across locations, indicating a system-wide validation gap.
- **Priority action:** Standardize Employment Status inputs using controlled values.

## Data Quality Remediation Framework

| Priority | Issue_Type | Governance_Owner | Remediation_Action |
|---|---|---|---|
| High | Invalid | Data Governance Team | Align with business rules or external reference data |
| High | Invalid | Credit Bureau Integration | Normalize scoring scale (e.g. 300–850) |
| High | Invalid | HR/Data Entry Team | Standardize Employment_Status values (use controlled taxono |
| High | Invalid | HR Team | Validate against realistic age ranges (e.g. 18–100) |
| High | Outlier | Risk/Compliance Team | Apply thresholds and investigate anomalies in source system |
| Low | Missing | Customer Service | Estimate based on account creation date or flag for review |

# Clean Data Quality Analysis & Insights

## RowQuality

- ☑ Select all
- ☑ Corrected (1)
- ☑ Corrected (2)
- ☑ Issue
- ☑ OK

## Clean Data Insight

**Detection:** Invalid ages, out-of-range credit scores, and inconsistent Employment Status values were flagged.
**Correction:** Median imputation, capping utilization (0–1), and standardized mappings were applied.
**Flagging**: Records classified as *OK*, *Corrected (n)*, or *Issue*.
**Impact:** 319 cell issues across 500 records, affecting 279 rows. After remediation, issue **rate dropped from 55.8% to near-zero**, strengthening governance.
